

Business Problem: Reducing Subscription Churn

Context: A mid-sized Telecom company is losing customers faster than they can acquire them. Management wants to know *why* customers are leaving and identify which "at-risk" segments should be targeted with discounts to prevent them from quitting.

Key Objectives:

1. **Identify Patterns:** Do customers on month-to-month contracts churn more than those on yearly plans?
2. **Financial Impact:** How much Monthly Recurring Revenue (MRR) is being lost?
3. **Predictive Indicators:** Are customers with high technical support tickets more likely to leave?
